1. Introduction

APRO MLC Rugged Metal USB Flash Disk Generation 4SB – HERCULES-P Series, is specified as 2.0 High Speed Device, Mass Storage Class; USB-IF (USB Implementers Forum), WHQL (Window Hardware Quality Labs), EMI and IP-54/ IP-68 waterproof tests certified. In addition to being as a removable storage device, RUFD - Generation 4SB can also be configured as a bootable disk for system recovery. Also, its random access performance exceed the minimum requirement of Read Boost feature found in Microsoft Vista operating system, in which randomly access blocks of information are saved into RUFD - Generation 4SB for boosting up the average performance. Capacities are available for 4GB, 8GB, 16GB and 32GB.

Rugged Metal USB - Generation 4SB – HERCULES-P Series also offers unique customization for OEM customers by laser carvings.

1.1. Scope

This document describes the key features and specifications of Rugged Metal USB – Generation 4SB – HERCULES-P Series.

1.2. System Features

- Full metal enclosure design to endure various rough environments
- IP-54 & IP-68 Waterproof metal casing design
- USB 2.0 interface downwards compatible to USB 1.1
- USB 2.0 Mass Storage compliant
- Standard grade supports 0°C to 70°C, and Wide temp grade with conformal coating supports -40°C to +85°C
- Support partition management for Disk Lock and Password Protection
- Supports Ready Boost for Microsoft Vista O.S.
- Capacities from 4GB to 32GB

1.3. Flash Management Technology - Static Wear Leveling

In order to gain the best management for flash memory, APRO Rugged Metal USB HERCULES-P Series supports Static Wear-leveling technology to manage the Flash system. The life of flash memory is limited; the management is to increase the life of the flash product.

A static wear-leveling algorithm evenly distributes data over an entire Flash cell array and searches for the least used physical blocks. The identified low cycled sectors are used to write the data to those locations. If blocks are empty, the write occurs normally. If blocks contain static data, it moves that data to a more heavily used location before it moves the newly written data. The static wear leveling maximizes effective endurance Flash array compared to no wear leveling or dynamic wear leveling.

2. Product Specifications

For all the following specifications, values are defined at ambient temperature and nominal supply voltage unless otherwise stated.

2.5.1. Conformal coating

Conformal coating is a protective, dielectric coating designed to conform to the surface of an assembled printed circuit board. Commonly used conformal coatings include silicone, acrylic, urethane and epoxy. APRO applies only silicone on APRO storage products upon requested especially by customers. The type of silicone coating features good thermal shock resistance due to flexibility. It is also easy to apply and repair.

Conformal coating offers protection of circuitry from moisture, fungus, dust and corrosion caused by extreme environments. It also prevents damage from those Flash storages handling during construction, installation and use, and reduces mechanical stress on components and protects from thermal shock. The greatest advantage of conformal coating is to allow greater component density due to increased dielectric strength between conductors.

APRO uses MIL-I-46058C silicon conformal coating

3. Interface Description

3.1. APRO Rugged Metal USB Flash Disk interface
